

Seaward, M.R.D. & John, V. 2005. A comparative study of the lichens of two cemeteries in Belgrade, Serbia. – *Mycologia Balcanica* **2**: 65-68.

Abstract. A comparison of two cemeteries in Belgrade, Serbia, has been made in order to show how the different environmental factors affect their lichen diversity. The importance of cemeteries as refugia for lichens and as habitats for lichen recolonisation under ameliorating conditions in urban areas is stressed.
