

Temina, M., Wasser, S. P. & Nevo, E. 2004. New records of lichenized fungi from the Near East – *Mycologia Balcanica* 1: 139-151.

Abstract. Seven species of lichenized fungi (*Bagliettoa parmigerella*, *Collema callopismum*, *Dermatocarpon intestiniforme*, *Opegrapha demutata*, *O. subelevata*, *Phaeophyscia hirsuta*, and *Rinodinella dubyanoides*) that are new to the Near East were reported. New localities of 54 other species were recorded. Data on distribution of these species in various regions of the Near East and in the world were given.

Key words: lichen diversity, Near East, new records
